

Third Semester B.E./B.Tech. Degree Examination, June/July 2025

**Fluid Mechanics**

Max. Marks: 100

Note: 1. Answer any FIVE full questions, choosing ONE full question from each module.

2. M : Marks, L: Bloom's level, C: Course outcomes.

3. Assume Suitable missing data.

| Module – 1 |    |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                  | M  | L  | C   |
|------------|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|----|----|-----|
| Q.1        | a. | Define the following with their units<br>i) Max density      ii) Dynamic viscosity      iii) Kinematic viscosity<br>iv) Surface tension      v) Specific gravity.                                                                                                                                                                                                                                                 |                                                                                                                                  | 10 | L1 | CO1 |
|            | b. | Calculate the dynamic viscosity of an oil which is used for lubrication between a square plate of size $0.8 \text{ m} \times 0.8 \text{ m}$ and on inclined plane with an angle of inclination $30^\circ$ as shown in the Fig Q1(b), weight of the square plate is $300 \text{ N}$ and it slides down the inclined plane with a uniform velocity of $0.3 \text{ m/s}$ thickness of oil film is $1.5 \text{ mm}$ . |  <p style="text-align: center;">Fig Q1(b)</p> | 10 | L3 | CO1 |
| OR         |    |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                  |    |    |     |
| Q.2        | a. | Prove : i) Pascal's law of pressure      ii) Hydrostatic law.                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                  | 10 | L2 | CO2 |
|            | b. | A rectangular plane surface is $2 \text{ m}$ wide and $3 \text{ m}$ deep. It lies in the vertical plane in water. Determine the total pressure and position of center of pressure when its upper edge is horizontal and i) Coincides with water surface      ii) $2.5 \text{ m}$ below the free water surface.                                                                                                    |                                                                                                                                  | 10 | L3 | CO2 |
| Module – 2 |    |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                  |    |    |     |
| Q.3        | a. | Derive continuity equation in 3 Dimensions.                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                  | 10 | L2 | CO2 |
|            | b. | The velocity potential function is given by $\phi = 5(x^2 - y^2)$ . Calculate the velocity components at the point $(4, 5)$ .                                                                                                                                                                                                                                                                                     |                                                                                                                                  | 10 | L3 | CO2 |
| OR         |    |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                  |    |    |     |
| Q.4        | a. | Derive Integral form of energy equation.                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                  | 10 | L3 | CO1 |
|            | b. | Define and explain :<br>i) Source      ii) Sink      iii) Doublet<br>iv) Stream function      v) Potential function.                                                                                                                                                                                                                                                                                              |                                                                                                                                  | 10 | L3 | CO1 |

| Module – 3 |    |                                                                                                                                                                                                                                                                                                                                                   |    |    |     |

| Q.7        | a. | Derive Von-Karman momentum Integral equation for boundary layer flows.                                                                                                                                                                                                                                                                            | 10 | L1 | CO3 |
|            | b. | The velocity distribution in the boundary layer over a high spillway surface was found to be $\frac{u}{U_o} = \left(\frac{y}{\delta}\right)^{0.22}$ . Express the ratio between momentum thickness $\theta$ and displacement thickness $\delta^*$ .                                                                                               | 10 | L3 | CO3 |
| OR         |    |                                                                                                                                                                                                                                                                                                                                                   |    |    |     |
| Q.8        | a. | What is lift and drag? Derive them.                                                                                                                                                                                                                                                                                                               | 10 | L2 | CO3 |
|            | b. | A kite has an effective area of 0.4m <sup>2</sup> and weight 2N. In a wind of 40 Km/hr, the drag on the kite is 11.9 N. Determine the tension in the chord is the cord makes an angle of 45° with horizontal. Also determine the lift coefficient.                                                                                                | 10 | L4 | CO2 |
| Module – 5 |    |                                                                                                                                                                                                                                                                                                                                                   |    |    |     |
| Q.9        | a. | Derive Bernoulli's equation for i) Isothermal process ii) Adiabatic process.                                                                                                                                                                                                                                                                      | 10 | L1 | CO2 |
|            | b. | A gas with a velocity of 300 m/s is flowing through a horizontal pipe at a section where pressure $6 \times 10^4$ N/m <sup>2</sup> (absolute) and temperature 40°C. The pipe changes in diameter and this section pressure is $9 \times 10^4$ N/m <sup>2</sup> . Find the velocity of gas at this section if the flow is adiabatic.               | 10 | L4 | CO2 |
| OR         |    |                                                                                                                                                                                                                                                                                                                                                   |    |    |     |
| Q.10       | a. | Find an expression for velocity of sound wave in a fluid.                                                                                                                                                                                                                                                                                         | 10 | L3 | CO2 |
|            | b. | Calculate the stagnation pressure, temperature, density on the stagnation point on the nose of a plane, which is flying at 800 Km/hr through still air having a pressure 8.0 N/cm <sup>2</sup> (abs) and temperature (-10°C). Take $R = 2875/\text{Kg K}$ and $K = 1.4$ .                                                                         | 10 | L4 | CO2 |
